## ***Response to Amendment***

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10, 12 and 15-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Shiono et al. Shiono et al discloses a light pipe 12 limited by a certain first surface. The surface comprises patterns 21. The patterns 21 have diffractive properties for coupling the light out of the light pipe. The patterns further comprise uniform, mutually different areas with a certain distribution on the first surface.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 11 and 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shiono et al. Shiono et al discloses the claimed invention except for the specific fill ratios and period lengths of the diffractive surfaces. It would have been an obvious engineering design choice to modify the diffractive surfaces of Shiono et al to meet applicant's claimed parameters since the applicant fails to disclose any advantage or any unexpected results obtained in using the

specific fill ratios and period lengths for the diffraction projections and it appears the projections of Shiono et al would perform equally well at diffracting light.

***Response to Arguments***

5. Applicant's arguments with respect to claims 1-22 have been considered but are moot in view of the new ground(s) of rejection.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas M. Sember whose telephone number is (703) 308-1938. The examiner can normally be reached on Monday - Thursday from 8:00 AM - 5:00 PM. The examiner can also be reached on alternate Fridays.
